

Effective Programming Practices for Economists

Basic Python

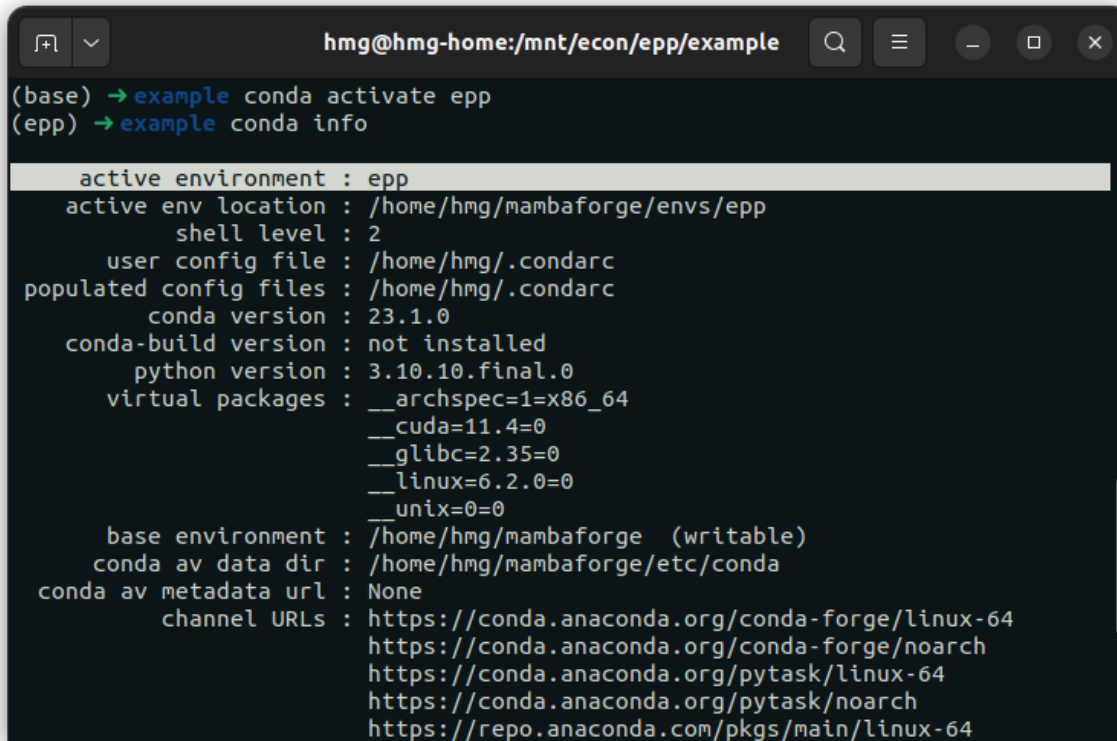

Running Python code via pytask

Janoś Gabler and Hans-Martin von Gaudecker

Preparation

- We assume you have installed anaconda and created the course environment
- Open a shell in the root directory of your project
 - On Windows, use the anaconda prompt or the powershell
 - If conda is not recognized in the powershell, check out this [stackoverflow post](#)
- Activate the environment using ``conda activate epp``
- Confirm the activation worked using ``conda info``

0: Activate and Info

```
hmg@hmg-home:/mnt/econ/epp/example
(base) → example conda activate epp
(epp) → example conda info

active environment : epp
active env location : /home/hmg/mambaforge/envs/epp
shell level : 2
user config file : /home/hmg/.condarc
populated config files : /home/hmg/.condarc
conda version : 23.1.0
conda-build version : not installed
python version : 3.10.10.final.0
virtual packages : __archspec=1=x86_64
                  __cuda=11.4=0
                  __glibc=2.35=0
                  __linux=6.2.0=0
                  __unix=0=0
base environment : /home/hmg/mambaforge (writable)
conda av data dir : /home/hmg/mambaforge/etc/conda
conda av metadata url : None
channel URLs : https://conda.anaconda.org/conda-forge/linux-64
              https://conda.anaconda.org/conda-forge/noarch
              https://conda.anaconda.org/pytask/linux-64
              https://conda.anaconda.org/pytask/noarch
              https://repo.anaconda.com/pkg/main/linux-64
```

How does pytask execute code?

- Executing .py files: Run the entire file
- Executing notebooks: Run individual cells
- Pytask: Run individual functions in multiple .py files

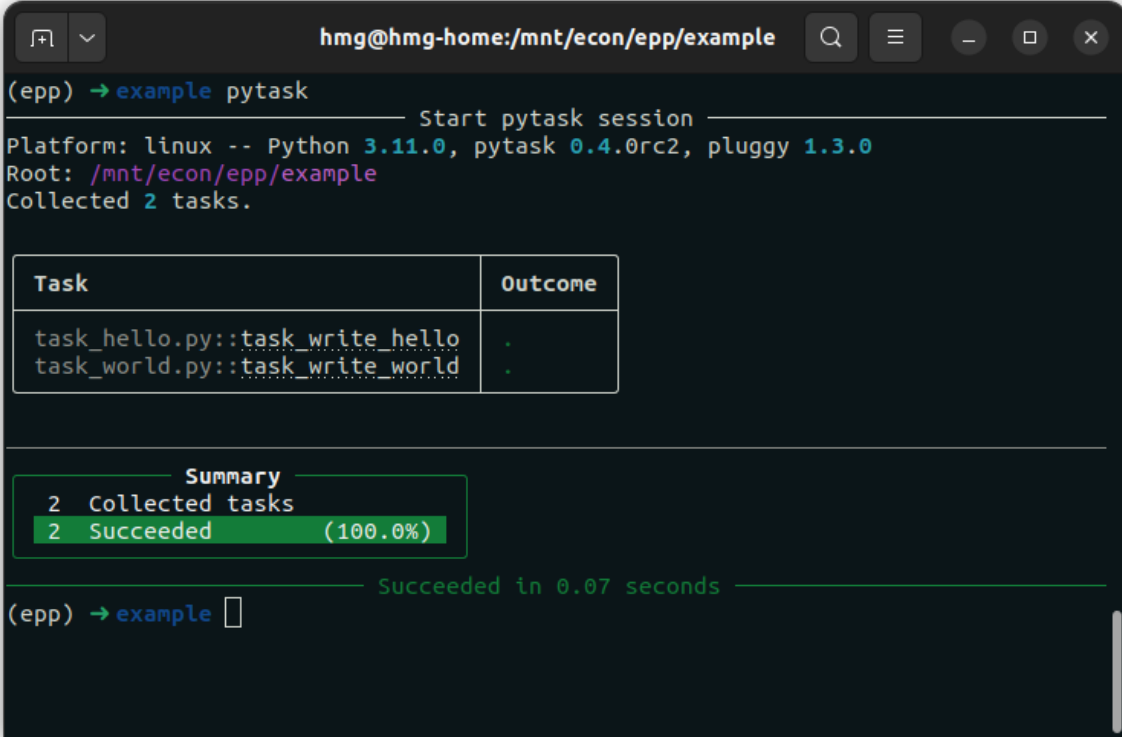

Very useful for automating research pipelines

Example Project Structure

- Our shell is in the `example` directory
- We want to run all functions that start with `task_` in both `.py` files
- Command is `pytask`

1: Execute

```
hmg@hmg-home:/mnt/econ/epp/example
(epp) → example pytask

Start pytask session
Platform: linux -- Python 3.11.0, pytask 0.4.0rc2, pluggy 1.3.0
Root: /mnt/econ/epp/example
Collected 2 tasks.

| Task                            | Outcome |
|---------------------------------|---------|
| task_hello.py::task_write_hello | .       |
| task_world.py::task_write_world | .       |

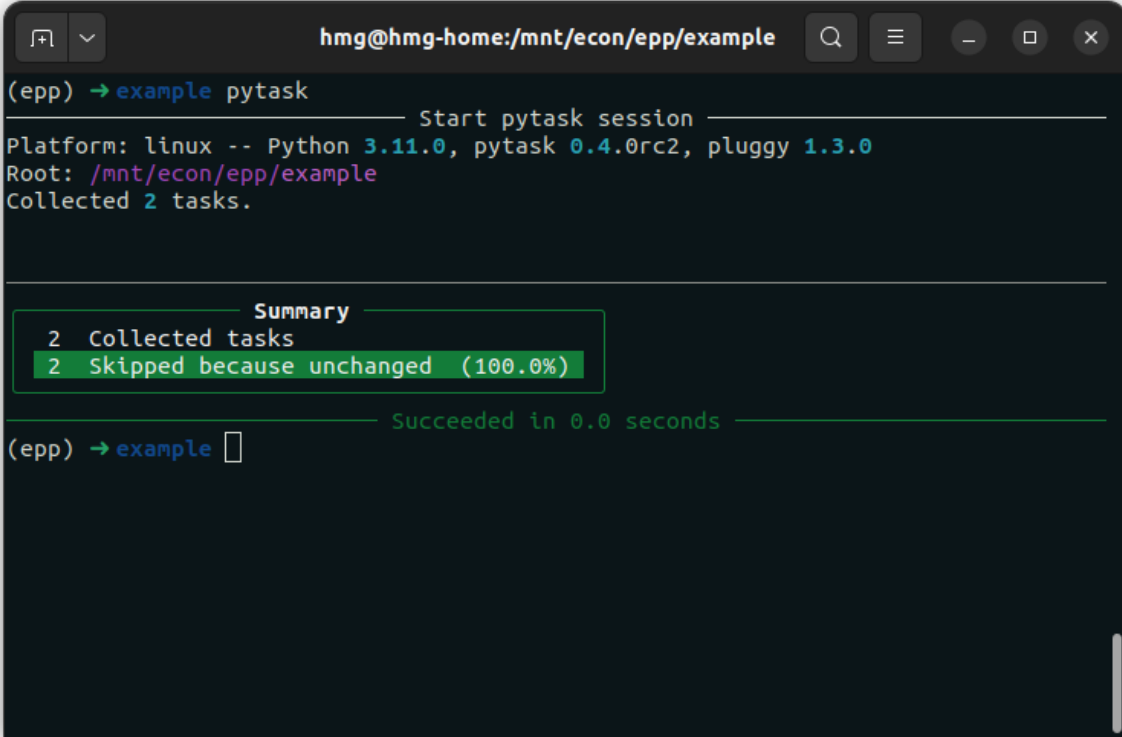

Summary
2 Collected tasks
2 Succeeded (100.0%)

Succeeded in 0.07 seconds
(epp) → example
```

The terminal window shows the execution of a pytask session. It starts with the command `(epp) → example pytask`. The session information includes the platform (linux), Python version (3.11.0), pytask version (0.4.0rc2), and pluggy version (1.3.0). The root directory is `/mnt/econ/epp/example`, and 2 tasks were collected. A table shows the tasks and their outcomes: `task_hello.py::task_write_hello` and `task_world.py::task_write_world`, both with a status of `.`. A summary box indicates that 2 tasks were collected and 2 succeeded (100.0%). The session succeeded in 0.07 seconds. The prompt `(epp) → example` is shown at the bottom.

1: Execute again

```
hmg@hmg-home:/mnt/econ/epp/example
(epp) → example pytask
Start pytask session
Platform: linux -- Python 3.11.0, pytask 0.4.0rc2, pluggy 1.3.0
Root: /mnt/econ/epp/example
Collected 2 tasks.

Summary
2 Collected tasks
2 Skipped because unchanged (100.0%)

Succeeded in 0.0 seconds
(epp) → example
```

The image shows a terminal window with a dark background. The window title is 'hmg@hmg-home:/mnt/econ/epp/example'. The user has entered the command '(epp) → example pytask'. The output shows the start of a pytask session, including the platform (linux), Python version (3.11.0), pytask version (0.4.0rc2), pluggy version (1.3.0), the root directory (/mnt/econ/epp/example), and that 2 tasks were collected. A summary box highlights that 2 tasks were collected and 2 were skipped because they were unchanged (100.0%). The session succeeded in 0.0 seconds. The prompt '(epp) → example' is shown again at the bottom.
