

Effective Programming Practices for Economists

Plotting

What to plot?

Janoš Gabler and Hans-Martin von Gaudecker

Reading list

- Calling Bullshit (Carl Bergstrom & Jevin West), Chapter 7
- How Charts Lie (Alberto Cairo).
- Better Data Visualizations (Jonathan Schwabish)
- The Functional Art (Alberto Cairo)
- Show Me the Numbers (Stephen Few)

Data types (Schwabish)

- Categorical
 - unordered
 - ordered
- Quantitative
 - discrete
 - continuous
 - interval scale
 - ratio scale

Some (too) simple recipes

- Raw data (continuous): Scatterplots
- Fractions of categorical / discrete variables: Bar charts, potentially stacked
- Levels: Bar charts (including zeros!), unless interval scale
- Changes over time: Line charts
- ...

Five guidelines (Schwabish)

1. Show the Data
2. Reduce the Clutter
3. Integrate the Graphics and Text
 - Label data directly (remove legend)
 - Write the title like a newspaper headline
 - Add explainers
4. Avoid the Spaghetti Chart
5. Start with Grey
