

Effective Programming Practices for Economists

## Miscellaneous Tools

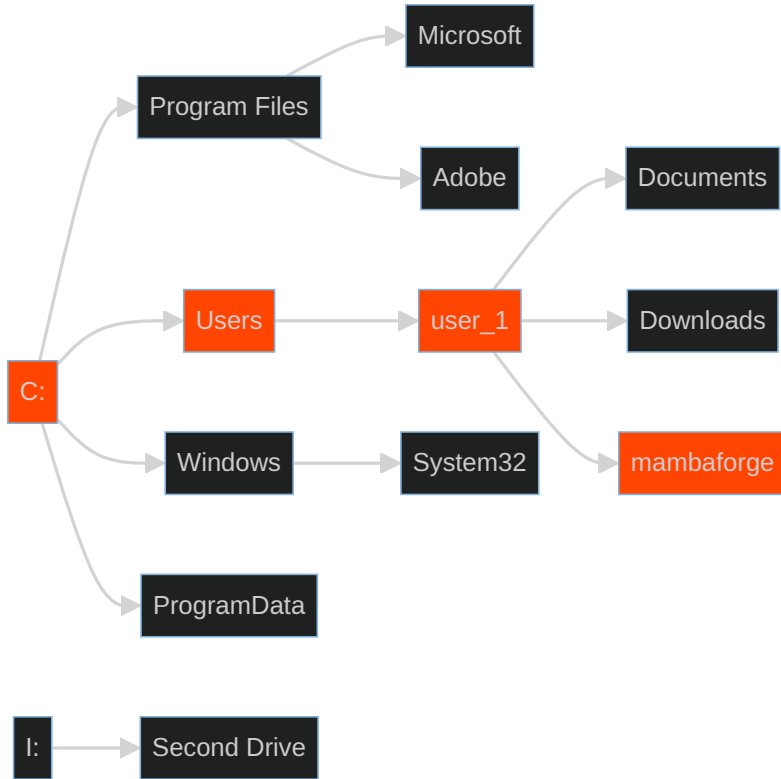

Navigation in the Windows shell

Janoś Gabler and Hans-Martin von Gaudecker

# Motivation

- Your shell has a present-working-directory (pwd)
- By default, the home directory
- Typically, you want the pwd to be your project folder
  - Can use right click in your file explorer (inefficient)
  - Can use ``cd``
- Optionally, you can also create, copy and delete files in the shell

Shell representation

C:\Users\user\_1\mambaforge

# Where to store your projects

- Good idea to store all git repositories somewhere close to home directory
- Example:
