

# **Effective Programming Practices for Economists**

## **Basic Python**

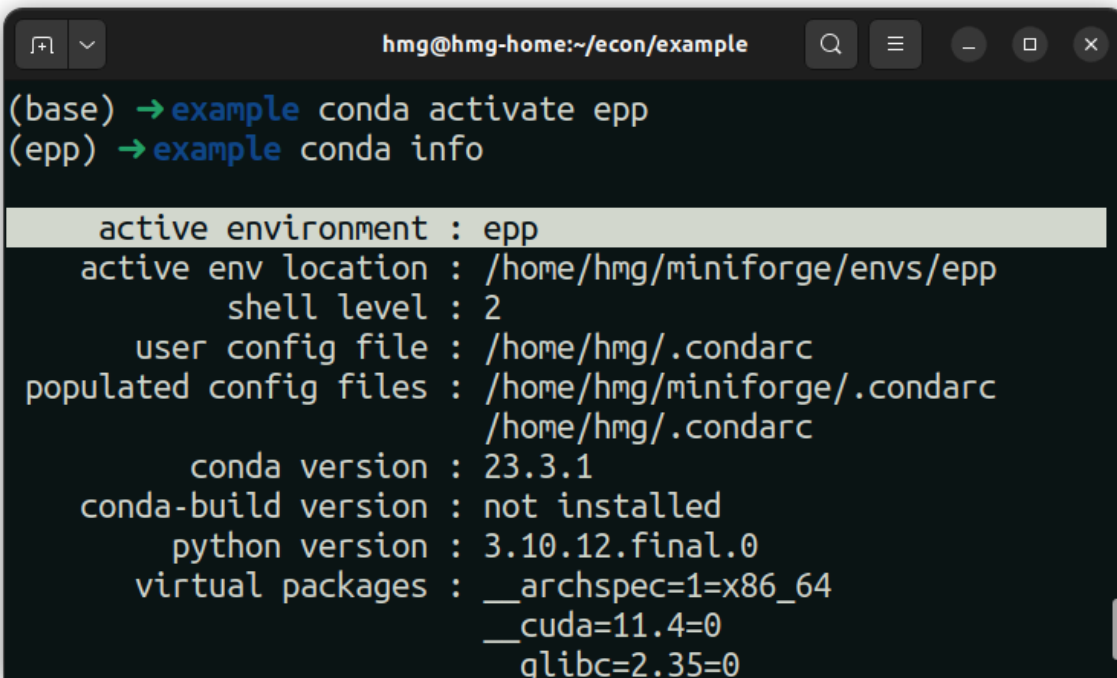

### **Running Python code via pytest**

Janoś Gabler and Hans-Martin von Gaudecker

# Preparation

- We assume you have installed anaconda and created the course environment
- Open a shell in the root directory of your project
  - On Windows, use the anaconda prompt or the powershell
  - If conda is not recognized in the powershell, check out this [stackoverflow post](#)
- Activate the environment using `conda activate epp`
- Confirm the activation worked using `conda info`

# 0: Activate and Info

```
hmg@hmg-home:~/econ/example
(base) → example conda activate epp
(epp) → example conda info

active environment : epp
active env location : /home/hmg/miniforge/envs/epp
shell level : 2
user config file : /home/hmg/.condarc
populated config files : /home/hmg/miniforge/.condarc
                        /home/hmg/.condarc
conda version : 23.3.1
conda-build version : not installed
python version : 3.10.12.final.0
virtual packages : __archspec=1=x86_64
                  __cuda=11.4=0
                  __glibc=2.35=0
```

# How does pytest execute code?

- Executing .py files: Run the entire file
- Executing notebooks: Run individual cells
- Pytest: Run individual functions in multiple .py files

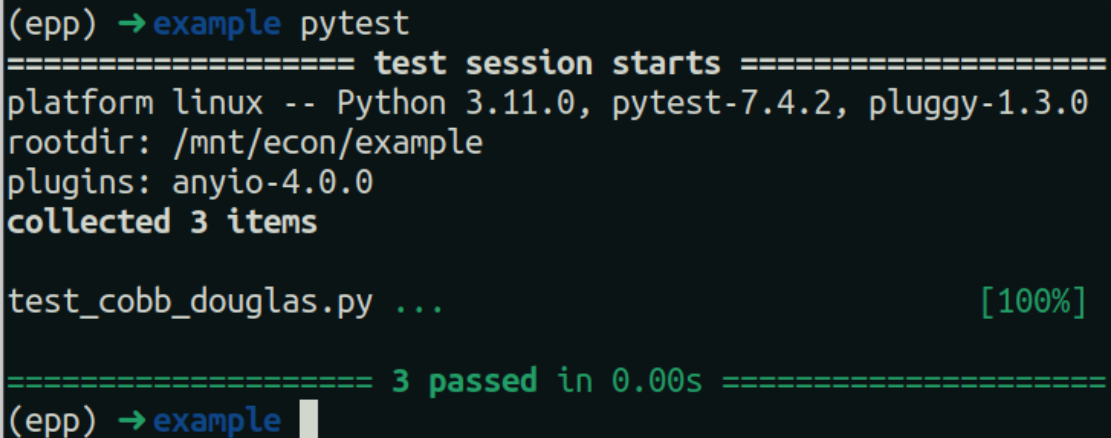

Very useful for automating test execution across an entire project

# Example Project Structure

- Our shell is in the `example` directory
- We want to run all functions that start with `test_` in `test_cobb_douglas.py`
- Could be spread across multiple test files, across different subdirectories
- Command is `pytest`

# 1: Execute

A terminal window with a dark background and light text. The title bar shows the user 'hmg' at 'hmg-home' in the directory '~/econ/example'. The terminal content shows a command to run 'pytest' in the 'example' directory. The output displays test session details: platform (linux), Python version (3.11.0), pytest version (7.4.2), pluggy version (1.3.0), root directory (/mnt/econ/example), and plugins (anyio-4.0.0). It reports 3 items collected and shows the execution of 'test\_cobb\_douglas.py' with a progress bar at 100%. The final result is '3 passed in 0.00s'. The prompt returns to '(epp) → example'.

```
(epp) →example pytest
===== test session starts =====
platform linux -- Python 3.11.0, pytest-7.4.2, pluggy-1.3.0
rootdir: /mnt/econ/example
plugins: anyio-4.0.0
collected 3 items

test_cobb_douglas.py ... [100%]

===== 3 passed in 0.00s =====
(epp) →example
```
