#### **Effective Programming Practices for Economists**

# Software engineering

What does pytest do?

Janoś Gabler and Hans-Martin von Gaudecker

# **Example**

consider this hypothetical survey about a programming course

```
>>> raw = pd.read_csv("survey.csv")
>>> raw
```

Q001	Q002	Q003
<b>0</b> strongly disagree	agree	python
1 strongly agree	strongly agree	Python
<b>2</b> -77	disagree	R
<b>3</b> agree	-77	Python
<b>4</b> -99	-99	Python
5 nan	strongly agree	Python
6 neutral	strongly agree	Python
7 disagree	agree	python
8 strongly disagree	-99	PYTHON
9 -77	-99	Ypthon

#### From the metadata you know

- Q001: I am a coding genius
- Q001: I learned a lot
- Q003: What is your favourite language
- -77 not readable
- -99 no reply

#### Two functions in clean\_data.py

```
def _clean_agreement_scale(sr):
    sr = sr.replace({"-77": pd.NA, "-99": pd.NA})
    categories = ["strongly disagree", "disagree", "neutral", "agree", "strongly agree"]
    dtype = pd.CategoricalDtype(categories=categories, ordered=True)
    return sr.astype(dtype)

def _clean_favorite_language(sr):
    sr = sr.replace({"-77": pd.NA, "-99": pd.NA})
    sr = sr.str.lower().str.strip()
    sr = sr.replace("ypthon", "python")
    return sr.astype(pd.CategoricalDtype())
```

# New module: test\_clean\_data.py

- 4 assertions whether actual results match our expectation
- Will look at syntax in subsequent screencast

# **Step 1: Collection**

- Go through all folders in working directory
- Collect all files with name 'test\_XXX.py'
- Go through those files and collect all functions that start with `test\_`
- All these test functions will be executed (fine-grained control possible)

```
hmg@hmg-home:~/econ/example
(epp) → example pytest --collect-only
 platform linux -- Python 3.11.0, pytest-7.4.2, pluggy-1.3.0
rootdir: /mnt/econ/example
plugins: anyio-4.0.0
collected 4 items
<Module test clean data.py>
 <Function test clean agreement scale check dtype>
 <Function test clean agreement scale known missings>
 <Function test clean favorite language known missings>
 <Function test_clean_favorite_language expected_typos>
(epp) → example
```

### **Step 2: Execute the tests**

- All test functions are executed
- A report is printed to the screen

```
hmg@hmg-home:~/econ/example
platform linux -- Python 3.11.0, pytest-7.4.2, pluggy-1.3.0
rootdir: /mnt/econ/example
plugins: anyio-4.0.0
collected 4 items
test clean data.py ....
 (epp) → example
```

### **Step 2: Execute the tests**

- pytest -v gives more detailed progress reports
- Can be very helpful for longrunning tests

```
hmg@hmg-home:~/econ/example
epp) → example pytest -v
 platform linux -- Python 3.11.0, pytest-7.4.2, pluggy-1.3.0 -- /mnt/miniforge/envs/e
pp/bin/python3.11
cachedir: .pytest cache
rootdir: /mnt/econ/example
plugins: anyio-4.0.0
collected 4 items
test clean data.py::test clean agreement scale check dtype PASSED
test clean data.py::test clean agreement scale known missings PASSED
test_clean_data.py::test_clean_favorite_language_known_missings_PASSED
test_clean_data.py::test_clean_favorite_language_expected_typos_PASSED
                                                            [100%]
 (epp) → example
```

# **Step 3: Inspect failures**

```
hmg@hmg-home:~/econ/example
(epp) → example pytest
platform linux -- Python 3.11.0, pytest-7.4.2, pluggy-1.3.0
rootdir: /mnt/econ/example
plugins: anyio-4.0.0
collected 4 items
test_clean_data.py .F..
def test clean agreement scale known missings():
     sr = pd.Series(["-77", "-99"])
     result = clean agreement scale(sr)
